

My name is Rashmi Handa. my daughter Saanvi Handa 6 years old is a C.P patient (Cerebral Palsy). She had septicemia 10 days after her birth, she was on ventilator for 15 days after that she survived. When she was eight months old she was not able to sit and crawl then I came to know that she is a C.P patient. When she was one year old, her therapies started but no progress was seen. She was taken to Bombay for consultation but there I came to know that except therapies and exercises no other treatment was there for her. Therapies continued for four years, then when she was 5½ year old I came to know about Dr Jain from internet.

When I came to Allahabad I visited Dr Jain. He told me that Saanvi can walk after the Butox injection and continued therapies for four months. Saanvi was given Butox injection on 5th May 2015. She had seven days plaster, then her therapies started and after three months I found changes in her. She started walking with support, she was able to sit without support; she started climbing the stairs which she could not do before. Her activities started I am really very thankful to Dr Jain (Founder of Trishla Foundation and Samvedna Trust). It was all possible due to her treatment.
